

NEMO

NEMO

“Nemo emerges as an outsider with its unique collection from outstanding architects of the 20th century (Le Corbusier, Mario Bellini, etc...) and today’s designers, each determined to bring the poetry and technique of their own time, as exemplified by the Bird lamp of Bernhard Osann.”

MASTERS

*Fondation
Le Corbusier*

Maison La Roche, Paris

The Le Corbusier Foundation, created in 1968 in Paris, was born and implemented down to its smallest detail by the great French architect of the twentieth century, Le Corbu, as he signed himself and was affectionately referred to by his admirers. Aware of the need to preserve his work and protect it from being wrongfully scattered, for more than half a century the Foundation continues to disseminate the work as well as to preserve the rich materials in his possession, which includes most of his original drawings, studies and projects, a collection of works of art, and written and photographic archives. Also protected by the Foundation are Le Corbusier's architectures, including the seventeen additions to the UNESCO World Heritage Site, as a «testimony to the invention of a new architectural language that marked a break with the past.

This conversation took place in early 2023 between Brigitte Bouvier and Federico Palazzari, CEO of NEMO Lighting.

Q We note a constant development of the Foundation's international activity.

How has your international professional experience in the French cultural service contributed to this evolution?

A Le Corbusier is the first «globalized» architect, that is, he traveled and gave lectures all over the world to convince of his ideas. He also welcomed in his studio young architects who revolutionized the architecture of their country, DOSHI in India, KIM CHUNG UP in Korea, MAEKAWA in Japan. The 17 works inscribed on the UNESCO World Heritage List since 2016 include 7 countries, so it is not surprising that the Foundation's international activity is so rich and lively.

In my career within the French cultural network internationally, I learned to work in

very different cultural contexts and developed the taste to create partnerships with cultural institutions, local actors to develop artistic or academic exchanges between France and the countries where I worked (USA, Morocco and Poland). At the Le Corbusier Foundation, I found this dynamic of partnerships and collaborations, for example, with the City of Chandigarh on restoration issues, with the American artists, Gerard and Kelly, for danced performances in the architecture of Le Corbusier, or with Japan for the safeguarding of the Floating Asylum, a barge built by Le Corbusier to welcome the homeless after the flood of 2018. This year the Suzhou Biennale of Design and Architecture in partnership with the Foundation is organizing an architectural competition on Le Corbusier's shed as a model of minimal and sustainable housing. This influence of LC's work internationally is also the result of partnerships developed in recent years.

Maison La Roche-Jeanneret, 1924, Rue Doctor Blanche, Paris.
Projecteur 365 pendant, whitesand finish.

Escargot at La Luce Exhibition in Geneva, 2015

Q The Maison La Roche, headquarters of the Foundation, has become in recent years a must-see destination for architecture lovers passing through Paris.

During the visit, it happens to meet great architects, important designers, writers, actors. What was the recipe for achieving this consolidated and unique position in such a short time?

A No recipe, except the genius of Le Corbusier can be a more effective communication and diversification of our partnerships and actions beyond the world of architecture.

Q Your many international activities are having a significant impact on emerging markets, particularly in Asia. The cultural role of the Foundation goes beyond Le Corbusier's message and, in fact, transfers a set of values and experiences in a global way. What kind of interest do you see in these initiatives?

A The mission of the Foundation, which Le Corbusier created during his lifetime, is to preserve, make known and transmit a work that has revolutionized the discipline and architectural practice. Today we can see its

ability to bring together across borders, its universal and profoundly humanist value. LC's work and research find an echo that can be amplified after the COVID crisis that has made us rediscover our interiors.

In 1925, when he imagined the Pavillon de l'Esprit Nouveau, LC was already anticipating current expectations for architecture: more greenery, more outdoor space, more comfort for the development of each and to live better together.

The relationship with nature and ecological awareness were at the heart of his work.

In a 1961 lecture at the Faculty of Medicine in Paris, he said:

«Urban planning is a word that is wrong because it does not concern itself only with the city; we all have to take care of something else, the Earth itself!»

Q When it comes to Le Corbusier's lighting programs, the partnership with Nemo has indeed revealed to the world projects that have remained hidden for many years and immediately became icons.

What is the functional recipe for a research and product development activity between the Foundation and Nemo?

A Nemo contributes to the Foundation's missions: to make known and transmit aspects of Le Corbusier's work, such as the creation of lighting and lighting systems for architecture. Le Corbusier liked to say that:

«Architecture is the correct and magnificent clever play of volumes assembled under the light.»

It is therefore not surprising that he also designed lighting for our interiors as well as for public space as in Chandigarh.

Our partnership with Nemo is based on trust, a shared love for innovation and research, and also the desire to share the beauty of form and design. Our collaboration is also based on the desire to transmit the history of objects that remain as faithful as possible to the first prototypes imagined by Le Corbusier.

Le Corbusier at his Paris rue N.C. apartment
© ph. Robert Doisneau - FLC/ADAGP.

The heritage dimension is as important as the innovation dimension for works that remain timeless.

Q The Le Corbusier Foundation is unique in the world of architecture and in the context of institutions that are intended to transmit and perpetuate a certain type of values. It is an organization of French law, whose corporate purpose and operating rules were dictated by Le Corbusier himself. In this context, how do you see the development of the Foundation and what do you hope in general for the institutions that deal with the conservation and dissemination in the world of architecture and design?

A During his lifetime, Le Corbusier created the Foundation that bears his name, and also designed its statutes and missions. Our role is also to think about the future and to ensure that

Le Corbusier's work does not become a heritage object but rather continues to inspire researchers and creators, and is also discovered and rediscovered by younger generations.

Q Your offices and the Foundation are located in the splendid Maison La Roche building, designed and built by Le Corbusier and a prestigious example of modern architecture where we find for the first time the architectural expression of the five points for a new architecture.

How does it feel to work on a daily basis inside a building whose project so solidly represents Le Corbusier's work?

A Experiencing working in a Le Corbusier building on a daily basis is both a great privilege and a great joy. Living from day to day the research of Le Corbusier on light, color, openness to nature, is a source of emotion but also of responsibility for the preservation and transmission of this work. This is a feeling shared by the entire Foundation team!

Q From what we can see, the link between the Le Corbusier Foundation and the Italian companies, Cassina for furniture and Nemo for lighting, is a link of success.

What are the aspects of the Italian companies with which you collaborate, especially Nemo, that contribute to valuing Le Corbusier's work?

A We have a special relationship with Italian companies, Cassina and Nemo. Cassina and Nemo are the historical publishers of Le Corbusier's furniture and lighting and I believe we share not only an attachment to heritage but also a concern for innovation and modernity. I am thinking of Cassina's ecological concern with its sustainable collection and Nemo's constant search to make LC's luminaires accessible worldwide and to transmit their history through exhibitions such as LUCE.

Q In your role as Director, which projects have the Foundation carried out in recent years that you are most proud of?

A Our work is a team effort and the most important project for the Foundation is not the most visible and the most spectacular: it is the creation of a database that will allow all audiences around the world to have access to all the Foundation's resources, archives, and collections.

The project to create a Le Corbusier museum also mobilizes us a lot because our collection of 8,000 drawings, 35,000 plans, paintings, tapestries, models, sculptures as well as the archives of the agency of 35 Rue de Sevres and Le Corbusier is not exhibited, nor accessible but kept in warehouses.

Q Can you tell us about the most important projects for the near future that the Foundation is following?

The Foundation must think about the future, and we have been working for several years on a project: the creation of a Le Corbusier Museum. We have a considerable collection that is kept in storage and that we would like to make available to the public.

We also think of this museum as a research center on architecture and the city, which also raises the question of the social and environmental responsibility of the architect.

Perriand Archives

Conversation with Pernette Perriand-Barsac, daughter of Charlotte.

Q As a result of your many international activities, Charlotte Perriand has become, in a way, an ambassador of architecture and design in the world as well as a charismatic and unique feminine symbol.

What are the elements that make Charlotte Perriand's work and personality so much of her era and yet still contemporary?

A For 70 years, Charlotte Perriand created timeless designs. Since the 1930s her furniture and lighting designs still continue to fit any contemporary home. Whether it be her profession or her mountaineering, a sport she practiced since the age of 20, Charlotte Perriand always maintained an equal standing with men. When climbing to the top of a 4,000 m mountain, men and women are equal. Like today's young women, from the age of 18 (in 1921), she traveled alone to Italy, then to Switzerland, England, Germany, Greece, and Russia.

In 1940, at the age of 37, she went to work in Japan, with the mission of guiding the country in the field of design. She had a salary equivalent to that of the Japanese Prime Minister. For a patriarchal country, that was an indisputable sign of recognition. Charlotte Perriand had always been a free woman. Her relationship to the body, to life, and to art always represented a deep sense of freedom.

She divorced in 1932, left her studio in Place Saint-Sulpice with two plates, cutlery, a pair of skis, and remarried under bombs in Vietnam in 1945.

Q Your many international activities are having a significant impact on emerging markets, particularly in Asia. The cultural role of the Charlotte Perriand Archives goes beyond Charlotte Perriand's message and, in fact, transfers a set of values and experiences in a global way.

What kind of interest do you see in these initiatives?

A The Charlotte Perriand Archives reflect Charlotte Perriand's philosophy: to enrich oneself with the differences, the know-how of others, and to blend the riches of cultures, improving each, without copying the other. Cultures advance by enriching each other. What would the art of ancient Rome be without Greek art? What would French art be without the Italian Renaissance? When Charlotte Perriand arrived in Japan, she immediately understood the enrichment she could derive from the religion of Tea (Zen) and Japanese civilization that knew neither tables, nor beds, nor chairs, nor cutlery except chopsticks. She often said the void is all-powerful because it can contain all of them. Interior architecture is also about organizing the emptiness of the home. In exchange, it brought the Japanese a new vision of the world. Yesterday as today, the meeting of Asia and the West is immensely rich. This is not new. Think of Marco Polo. Italian cuisine would not be what it is without him. The Silk Road has nourished the West and vice versa.

Portrait of Charlotte Perriand. © FLC/ADAGP.

Q Regarding Charlotte Perriand's lighting programs, the partnership with Nemo has indeed revealed to the world projects that have remained hidden for many years and immediately became icons.

What is the functional recipe for a research and product development activity between the Archives and Nemo?

A Every year we look for new drawings in the Archives, and then we discuss them with Federico Palazzari, who jumps on the projects like a great chef grabs a recipe that he had forgotten.

It is always a pleasure to work with Nemo because we do current publishing, using the constraints of contemporary standards and techniques. Charlotte Perriand's creations edited by Nemo are not dead, frozen in time. Charlotte loved technical innovation. Introducing LEDs that did not exist in the 50s or 60s is natural, because Charlotte

Perriand's approach was also to adapt to the realities of the present.

Q From what can be seen, the link between the Charlotte Perriand Archives and Italian companies, Cassina for furniture and Nemo for lighting, is a link of success.

What aspects of the Italian companies with which you collaborate, especially Nemo, contribute to valuing Charlotte Perriand's work?

A Nemo and Cassina always work with an international perspective. They are industrialists on a human scale who think of the greater number, and who establish a balance between an author's projects (as we say *auteur cinema*) and the general public. Cassina or Nemo immediately understand the projects when presented to them. We choose together and go directly to the prototype. Nemo has a sense of showcasing projects with simple means, like Charlotte's lighting.

Q Can you tell us about the most important projects for the near future that the Archives follow?

A We are looking forward to the prototype of the next luminaire.

And especially the next Charlotte Perriand exhibition in a major Italian museum. For now, it is a secret!

Q In your opinion, is there a project, an object, or a lamp from Charlotte Perriand's collection that summarizes and synthesizes her values in one way or another?

A The *Applique à Volet Pivotant* wall lamp is a masterpiece of design. It is available in several variations and adapts to all constraints. It is a butterfly on the wall that illuminates the world close to the gaze. Sometimes it is downright a multicolored and joyful sculpture as if a flight of butterflies had landed by good fortune.

Le Corbusier, Picasso and Lampe de Marseille at Unité d'habitation, Marseille France

Conversations with

Rudy Ricciotti

Arihiro Miyake

Bernhard Osann

Guillaume Bloget

Charles Kalpakian

Valerio Sommella

Rudy Ricciotti

Q What does drawing light means for you?

R.R. Either derision, Christian guilt, paranoia, or existential difficulty are the necessary drivers of research and development work.

Q What is the most complicated aspect in designing a lamp?

R.R. To run the exception one runs the ridiculous, said a philosopher of the Enlightenment. The trap is there! Originality has become the kitsch of pornography.

Q Where does the inspiration for your Nemo lamps come from?

R.R. The economy of material, recycling, resistance to destruction were the doctrinaire basis of this creation.

Q The ideal place where you would like to see your work installed?

R.R. I don't have that fantasy!

Q The future of lighting design from your point of view?

R.R. The less we enlighten, the better we'll be! The cultivation of artificial light must not become exhibitionism.

Mais Plus Que Cela Je Ne Peux Pas. Designed by Rudy Ricciotti.

Arihiro Miyake

Q What does drawing light means for you?

A.M. Lighting always presents two different purposes: one of course is to create light, which is necessary, but at the same

time there is also the function of creating space, atmosphere.

So, I would say that there are two ways of designing that: either a light just disappearing into the space or becoming a character and defining the room. I personally believe that in most of the cases independent designers should design objects with a character, a strong one.

Q What is the most complicated aspect in designing a lamp?

A.M. Lighting has dramatically changed because of LED. Before you designed just the shade, and today you can even design the lighting source itself. We have more freedom but, at the same time, I need to go beyond the conventional idea of lighting objects.

Q Where does the inspiration for your Nemo lamps come from?

A.M. I am inspired by everything. It is not a linear process, one day after the other: sometimes an idea stays in my mind for years until it matches with another. I am constantly interested in new technologies and when I find something special, I try to understand how it works. I am fascinated with bridges as well, their construction and their structures. I am putting these things together.

Q The ideal place where you would like to see your work installed?

A.M. Places where peoples likes it! And can appreciate it at its best. Other than that, in my career I designed several restaurants. So, when I design a lamp, I always consider these kinds of locations. Nemo lights, for dimensions and not only for that, are suitable

for community places like restaurants.

Q The future of lighting design from your point of view?

A.M. I don't know if my believes and reality will match but I think that lighting in our lives will be more sophisticated, more than now. Just think about the electricity costs and the impact of that consumption. It will be more and more crucial, and the designers' contribution will be interesting because we don't stuck with one technology or one possibility. What I mean is that a table is always a table, with four legs. Same for a chair. The lighting could be dramatically transformed, I don't know how and I am looking forward it. It has already happened when we started using the LED instead of light bulbs, and it may continue furthermore.

Kepler minor, pendant. Designed by Arihiro Miyake.

Bernhard Osann

Q What does drawing light means for you?

B.O. Light is immaterial, kind of magic. It strongly influences how we perceive our environment. I use light purposefully and selectively. For me it is important to allow you to dose the intensity of light and to spread light within a room in different ways. The flexibility of the lamp plays a particular role. It helps to apply the light precisely where it's needed.

Q What is the most complicated aspect in designing a lamp?

B.O. A new lamp should have a certain eligibility, should offer something new, something better regarding to its technology,

Swan plus, wall. Designed by Bernhard Osann.

function, and design. The starting point is a strong basic idea, a concept. It determines the design. I try to find the right balance between the lamp as a sculpture and a tool. Depending on its application, the design tends more to one of these poles.

Q Where does the inspiration for your Nemo lamps come from?

B.O. Essentially inspiration is everywhere. Creativity is like an inner pool of impressions which you can access and combine with no limits. For me, essential impressions come from nature, physics, and geometry. I like the design process to be playful and experimental. I am eager to try something new and push the limits.

Q The ideal place where you would like to see your work installed?

B.O. My lights are filigree and graphic in their appearance. The ideal location would be a spot which leaves enough space for the lamp to enrich the room with its light and shape and create a good atmosphere in the room. I like to see my lamps together with beautiful natural materials such as wood which accentuates the contrast to their graphic appearance.

Q The future of lighting design from your point of view?

B.O. The fusion of different areas of life requires increasingly flexible lighting options. In the future, luminaires must meet these requirements both technically and aesthetically.

At the same time, responsible resource management will also come into focus, as in all other areas. I believe that durable, high-quality products will prevail in the long run.

Guillaume Bloget

Q What does drawing light means for you?

G.B. A lamp is designed around a technology: the light source. It's a playground for design where you have to link light effects, technology and interaction. Since the subject is the light itself, what is the status of the object that produces it? From this point of view, Type lamp is a tool, the search for the effect ends up determining the shape.

Q What is the most complicated aspect in designing a lamp?

G.B. As with all objects: the hardest part is making a product that deserves to exist in a context saturated with objects. It's a real responsibility for designers today. You must take a step back and be able to ask yourself the question: Is this object innovative enough? Not only technically, but also aesthetically. What are the benefits of this new piece compared to the existing ones?

Q Where does the inspiration for your Nemo lamps come from?

G.B. It is an uninspired lamp! I mean, there was no vision or click. It results from a pure reflection on the modularity of light. How to offer a great possibility of lighting with the most economical gesture. The Type lamp is the interface between these two goals.

Q The ideal place where you would like to see your work installed?

G.B. Everywhere, except on a sidewalk...

Q The future of lighting design from your point of view?

G.B. As with any object that depends directly on a technology, lamps will be more and more immaterial, efficient, intuitive, and integrated into the environment. A futuristic glimpse of

light in our spaces could be a stage by Robert Wilson. His projects are brilliant choreographic syntheses between bodies, lights, objects and music. Nothing can be taken away or added, everything is balanced. And that is what makes the emotional power of his work. Coming back to lighting, I think that an overview - the body in space - associated with a choreographic dimension can nourish the reflection. Ideally, the light of the future should be a kind of luminescent gaseous cloud in levitation, that you can't dissociate clearly from the space. Maybe I should talk to Federico Palazzari about that: he has a very good engineering team.

Type, floor. Designed by Guillaume Bloget.

Charles Kalpakian

Q What does drawing light means for you?

C.K. Drawing light on paper is very interesting because you have to express light without really seeing it. Light is a source of imagination in my daily life. When I draw a light, i know exactly what effect I'm trying to express. Light is above all a personal expression, but in the same time connected to collective memory. Light gives a frame in a scene, it's what I define first when I start to create a lamp.

Q What is the most complicated aspect in designing a lamp?

C.K. It's to create nice shadows ;) The light and the shadow are connected. The most challenging part is around this light source. Every light has its own story, because designing lamps is designing function and application in and for a space, which requires research into the interaction of light in our daily lives. How people will use them and in what context. It takes time and patience to move from a concept to the reality of a product. To be convinced of a concept is to take the time.

Q Where does the inspiration for your Nemo lamps come from?

C.K. I admire the light coming from Chiaroscuro, which has fascinated me since I started working with Nemo. I like to work with the contrast of geometrics volumes. My reference in this discipline are Brancusi, Edouardo Chillida. My approach is both plastic and sculptural, because the object has to live both off and on, it has to fit into the architecture without hiding it, on the contrary it contributes to its perception. I'm always to bring function for a light but a theatrical dimension.

Q The ideal place where you would like to see your work installed?

C.K. It will be at La Fabrica of Ricardo Bofill, an architectural masterpiece where shadows, luminosity and concrete create endless mutation and stories. Every space, corners, windows and walls of this building is a journey for the visitor.

Q The future of lighting design from your point of view?

C.K. I think the future of lighting is the mutation. Light has always moved society forward; it reflects its modernity. Research has shown that lighting has a significant impact on our circadian rhythms, mood, and overall health, so maybe the future is more Human Centric Lighting.

Wall Shadows Grand, wall. Designed by Charles Kalpakian.

Valerio Sommella

Q What does drawing light means for you?

v.s. Designing light has always been one of the most fascinating aspects of my

work, which over the years has allowed me to design everything, for the simple fact that nothing like light can transform the space around us. Light has immense power, it can make the ugly beautiful and vice versa, and I find that designing the objects that convey it is a great privilege.

Q What is the most complicated aspect in designing a lamp?

v.s. One of the most complex aspects is to imagine the behaviour of the light and its interaction with the other materials that

Portofino, table, black, sahara noir marble. Designed by Valerio Sommella.

make up the lamp, as well as the transition from the rough idea to the final product... as simple as it may seem, a lamp is almost always a complex object.

Q Where does the inspiration for your Nemo lamps come from?

v.s. The Portofino lamp is the result of a study on portable lamps and the desire to create a slim, slender and elegant object. A presence on the table that would not obstruct the eye while offering excellent illumination. From these considerations comes the tapered stem, the slender wide head, counterbalanced by the marble base, a strongly characterising and distinctive element.

Q The ideal place where you would like to see your work installed?

v.s. I would start in some restaurant in Portofino, on some terrace by the sea, although I imagine it would be just as well in contract contexts as in residential settings such as the long table in my house where I never wanted a pendant lamp.

Q The future of lighting design from your point of view?

v.s. The lighting sector is technologically very much alive and evolving in many respects. One example is what we have done today with Portofino, unthinkable 10 or 15 years ago. I expect the same from the future, to be able to think and do things that would seem crazy today.

“As in nature, a minimal of energy and material can fulfil a function at its best”

Bernhard Osann

Essential aesthetics and pure functionality. The swivelling arc in matte black painted steel allows wide movement, and gives the opportunity to both interact and decorate the space. The cylindrical spot, with optional anti-glare filter, allows the light to be directed as required. The light beam is warm and diffuse.

IT Estetica essenziale e funzionalità pura. L'arco orientabile in acciaio verniciato nero opaco consente ampi movimenti, consentendo di interagire e allo stesso tempo decorare lo spazio. Lo spot cilindrico, con filtro antiriflesso opzionale, permette di orientare la luce in base all'esigenza. Il fascio di luce è caldo e diffuso.

FR Esthétique essentielle et fonctionnalité pure. L'arche réglable en acier peint noir mat permet de larges mouvements, permettant d'interagir et en même temps de décorer l'espace. Le spot cylindrique, avec filtre antireflet en option, permet de diriger la lumière en fonction des besoins. Le faisceau lumineux est chaud et diffus.

DE Wesentliche Ästhetik und reine Funktionalität. Der schwenkbare Bogen aus mattschwarz lackiertem Aluminium erlaubt viel Bewegung, ermöglicht Interaktion und dekoriert gleichzeitig den Raum. Der zylindrische Strahler mit optionalem Blendschutzfilter erlaubt es, das Licht nach Bedarf zu lenken. Der Lichtstrahl ist warm und diffus.

“If you include the conditions of a room in the design of a floor lamp, you see completely new possibilities: the luminaire can lean against the wall, it does not need a base. At the same time, the wall can be used to create pleasant, indirect light. Designing Neo, I sought the perfect shape for this interaction”

Bernhard Osann

Neo is inspired by the aesthetic reduction of articulated arms. Clean design and functionality interact with the space: the lamp adds movement to the room by leaning against the wall, which both supports it and spreads the light.

- IT Design leggero, essenziale e funzionalità interagiscono con lo spazio. Neo ha origine dalla semplificazione estetica dei bracci articolati. La lampada crea movimento nell'ambiente appoggiandosi alla parete che, la sostiene e al tempo stesso ne diffonde la luce.
- FR Design léger, essentiel et fonctionnalité interagissent avec l'espace. Neo provient de la simplification esthétique des bras articulés. La lampe crée du mouvement dans l'espace en s'appuyant contre le mur qui la soutient et en même temps diffuse sa lumière.
- DE Leichtes, elementares Design und Funktionalität interagieren mit dem Raum. Neo hat ihren Ursprung in der ästhetischen Vereinfachung des Gelenkarms. Die Leuchte schafft Bewegung im Raum, indem sie sich gegen die Wand lehnt, die sie stützt und gleichzeitig das Licht streut.

"The lamp was born from the bold attempt to overcome the laws of nature. It almost seems as if this succeeded. It balances at the limits of the impossible, like a bird. While the vertical element keeps the balance, the horizontal element emits the light"

Bernhard Osann

Bird

Bernhard Osann

Bird is a unique project, a synthesis of constant ambition, design awareness and engineering. An object that rests - and balances - on the edge of any surface: the body oscillates and moves, but always returns to a horizontal position thanks to a vertical brass counterweight. The light source, incorporated in the arm, rotates around its own axis, for diffused direct and indirect lighting of great impact.

IT Bird è un progetto unico, una sintesi di costante ambizione, sensibilità progettuale e meccanica. Un oggetto che si appoggia - e si bilancia - sul bordo di qualsiasi superficie: il corpo oscilla e si muove, ma torna sempre in posizione orizzontale grazie a un contrappeso verticale in ottone. La sorgente luminosa, incorporata nel braccio, ruota attorno al proprio asse, per un'illuminazione diffusa diretta e indiretta di grande impatto.

FR Bird est un projet unique, synthèse d'une ambition constante, d'une conscience du design et de l'ingénierie. Un objet qui repose - et s'équilibre - sur le bord de n'importe quelle surface : le corps oscille et bouge, mais revient toujours à l'horizontale grâce à un contrepoids vertical en laiton. La source lumineuse, incorporée dans le bras, tourne autour de son propre axe, pour un éclairage direct et indirect diffus de grand impact.

DE Bird ist ein einzigartiges Projekt, eine Synthese aus konstantem Ehrgeiz, Designbewusstsein und Technik. Ein Objekt, das auf der Kante einer beliebigen Oberfläche ruht - und balanciert: Der Körper schwingt und bewegt sich, kehrt aber dank eines vertikalen Gegengewichts aus Messing immer in eine horizontale Position zurück. Das in den Arm integrierte LED-Modul dreht sich um seine eigene Achse und sorgt für eine diffuse direkte und indirekte Beleuchtung.

“In a time in which the light source itself can even be designed according to each object, the question would be how the lighting design should meet technology and how the light should look like. My answer is a simple, yet very fresh attempt, free from ready-made ideas, and rules based on classic lighting sources. In The Wind is a way to the future”

Arihiro Miyake

In The Wind

Arihiro Miyake

The In The Wind collection is made of extruded aluminium whose off-axis twisting allows diffuse 360° lighting. The helical shape is achieved through a technique developed specifically by Nemo. The diffusers are made of opaline methacrylate while the extremities are made of die-cast aluminium.

- IT La collezione In The Wind è realizzata con estruso di alluminio la cui torsione fuori asse permette un'illuminazione diffusa a 360°. La forma elicoidale è ottenuta attraverso una tecnica sviluppata appositamente da Nemo. I diffusori sono in metacrilato opalino mentre le parti terminali sono in alluminio pressofuso.
- FR La collection In The Wind est réalisée en aluminium extrudé dont la torsion hors axe permet un éclairage diffus à 360°. La forme hélicoïdale est obtenue grâce à une technique développée spécifiquement par Nemo. Les diffuseurs sont en méthacrylate opalin tandis que les extrémités sont en aluminium moulé sous pression.
- DE Die Kollektion In The Wind besteht aus fließgepresstem Aluminium, dessen außermittige Verdrehung eine diffuse Beleuchtung von 360° ermöglicht. Die spiralförmige Form wird durch eine speziell von Nemo entwickelte Technik erreicht. Die Diffusoren bestehen aus opalem Methacrylat, während die Endstücke aus Aluminiumdruckguss hergestellt sind.

"Blurring the lines between an industrial design piece and a sculptural masterpiece, this illuminator acts as a spatial focal point when displayed within one's home."

Charles Kalpakian

Wall Shadows

Charles Kalpakian

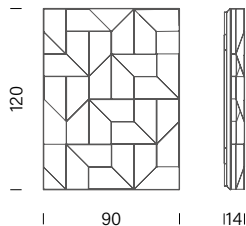

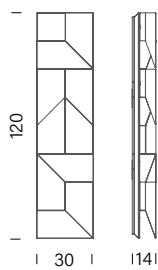

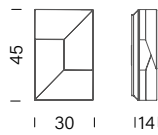

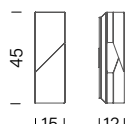

Inspired by the repetitive rhythm of monuments such as the Baalbeck archaeological site in Lebanon, Wall Shadows provides unusual lighting scenarios and diffused LED light, blurring the line between industrial design work and sculptural masterpiece. Available in different sizes, they are made of laser-cut and matte white painted aluminium.

IT Ispirato al ritmo ripetitivo dei monumenti come il sito archeologico di Baalbeck in Libano, Wall Shadows offre scenografie luminose insolite e un'illuminazione a LED diffusa, attenuando il confine tra l'opera di design industriale e il capolavoro scultoreo. Disponibili in differenti dimensioni, sono realizzate in alluminio tagliato a laser e verniciato bianco opaco.

FR Wall Shadows est une famille d'appliques murales, capables d'offrir des scènes lumineuses inhabituelles et un éclairage LED diffus. Le rythme répétitif s'inspire de monuments tels que le site archéologique de Baalbeck au Liban, brouillant la frontière entre le travail du design industriel et le chef-d'œuvre sculptural. Disponibles en différentes tailles, ils sont fabriqués en aluminium découpé au laser et peints en blanc mat.

DE Wall Shadows ist eine Familie von Wandleuchten, die ungewöhnliche Lichtstimmungen und diffuses LED-Licht bieten. Der sich wiederholende Rhythmus ist von Grabungsstätten wie der archäologischen Stätte Baalbeck im Libanon inspiriert und verwischt die Grenze zwischen industriellem Design und skulpturalem Meisterwerk. Sie sind in verschiedenen Größen erhältlich, bestehen aus lasergeschnittenem Aluminium und sind mattweiß lackiert.

"A thin luminescent disk suspended between technology and memory. We searched in memory with technological devices in order to find the essentiality."

Euga Design

Panama

Euga Design

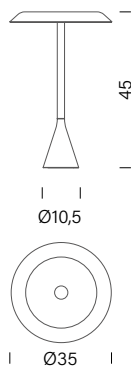

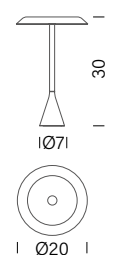

Panama combines a clean, linear silhouette with a cone-shaped base, a slim stem and a flat lampshade. Made of methacrylate, they are equipped with a polycarbonate reflector with anti-glare treatment and are therefore suitable for both domestic and work environments. The mini version is also available in a cordless rechargeable battery version. Duration: 17 hours, recharge: 7 hours.

- IT Panama combina una silhouette pulita e lineare con una base a forma di cono, uno stelo sottile e un paralume piatto. Realizzate in metacrilato sono dotate di un riflettore in policarbonato con trattamento antiabbagliamento e quindi sono adatte sia ad ambienti domestici che di lavoro. La versione mini è disponibile anche nella versione cordless a batteria ricaricabile. Durata: 17 ore, ricarica: 7 ore.
- FR Panama combine une silhouette épurée et linéaire avec une base en forme de cône, une tige mince et un abat-jour plat. Fabriqués en méthacrylate, ils sont équipés d'un réflecteur en polycarbonate traité anti-reflets et conviennent donc aux environnements domestiques et professionnels. La version mini est également disponible dans une version avec batterie rechargeable sans fil. Durée: 17 heures, recharge: 7 heures.
- DE Panama kombiniert eine klare, lineare Silhouette mit einem kegelförmigen Sockel, einem schlanken Schaft und einem flachen Schirm. Sie bestehen aus Methacrylat und sind mit einem Polycarbonat-Reflektor mit Blendschutz ausgestattet. Daher eignen sie sich sowohl für den Hausgebrauch als auch für den Arbeitsbereich. Die Mini-Version ist auch als Akku-Version erhältlich. Dauer: 17 Stunden, Aufladen: 7 Stunden.

"A slit of light in a monolithic mass: the contrast between material and immaterial, the basis of all lighting project"

Ilaria Marelli

Ara was inspired by architectural light cuts, while featuring a rotating body that allows light to be modulated and redirected. The DIM TO WARM technology allows to modify the light's colour temperature, switching smoothly from vivid white to soft warm, replicating the same effect as an old incandescent bulb.

- IT Dotata di un corpo rotante che consente di modulare e reindirizzare la luce, Ara si ispira ai tagli di luce dell'architettura. La tecnologia DIM TO WARM consente di modificare la temperatura di colore della luce, passando senza soluzione di continuità da un bianco intenso a un caldo morbido.
- FR Doté d'un corps rotatif qui permet de moduler et de rediriger la lumière, Ara s'inspire des coupes lumineuses architecturales. La technologie DIM TO WARM permet de modifier la température de couleur de la lumière, passant de manière transparente d'un blanc profond à un chaud doux, reproduisant le même effet qu'une vieille ampoule à incandescence.
- DE Ara ist mit einem drehbaren Leuchtenkörper ausgestattet, der es ermöglicht, das Licht zu lenken und zu verändern. Inspiriert wurde Ara von architektonischen Lichtschnitten. Die DIM TO WARM-Technologie ermöglicht es, die Farbtemperatur des Lichts zu verändern, der nahtlos von einem intensiven Weiß zu einer warmen Lichtfarbe übergeht und denselben Effekt wie eine alte Glühbirne bietet.

Type

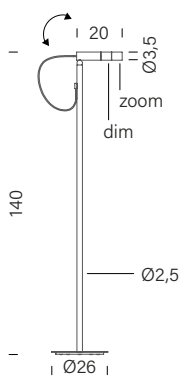

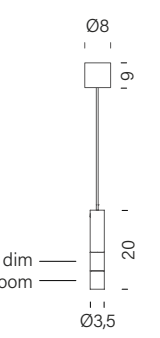

Guillaume Bloget

Type represents a sophisticated and technical object that brings the most advanced research in optics and dimming control into the domestic environment. Designed for spot lighting, a simple hand gesture can orient the light, vary the intensity and adjust the beam angle. A magnetic spherical joint swivels the spot, providing significant adjustments.

- IT Oggetto sofisticato e tecnico che porta nell'ambiente domestico le più avanzate ricerche nel campo dell'ottica e del controllo della luminosità. Type è stata progettata per un'illuminazione spot: con un semplice gesto della mano è possibile orientare la luce, variare l'intensità e regolare l'angolo del fascio luminoso. Uno snodo sferico magnetico fa ruotare lo spot, consentendo notevoli possibilità di orientamento.
- FR Objet sophistiqué et technique qui apporte à l'espace domestique la recherche la plus avancée dans le domaine de l'optique et du contrôle de la luminosité. Type a été conçu pour l'éclairage ponctuel: d'un simple geste de la main, il est possible de diriger la lumière, de varier l'intensité et d'ajuster l'angle du faisceau lumineux. Une articulation magnétique sphérique fait pivoter le spot, permettant des possibilités d'orientation considérables.
- DE Ein hochentwickeltes und technologisches Produkt, das die fortschrittlichste Forschung auf dem Gebiet der Optik und der Lichtsteuerung in die häusliche Umgebung bringt. Type ist für die Spot-Beleuchtung konzipiert: Mit einer einfachen Handbewegung kann man das Licht lenken, die Lichtstärke variieren und den Winkel des Lichtstrahls einstellen. Ein magnetisches Kugelgelenk ermöglicht die Drehung des Spots und damit umfangreiche Ausrichtungsmöglichkeiten.

"A rigorous geometric research led to a lightweight and powerful piece featuring significant lighting performances."

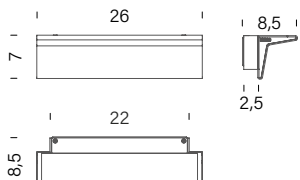

Roberto Paoli

The clean silhouette of Zena is the result of a rigorous research of geometrical design that leads to the conception of an essential and powerful artefact featuring significant lighting performances. Zena represents a revolution in the world of wall lamps, a contemporary experiment that transforms the wall lamp from a traditionally static object into a dynamic and sophisticated element, an important synthesis of lightness, power and comfort. Zena features a recyclable aluminium extrusion.

- IT L'essenzialità di Zena è il risultato di un attento studio di ricerca geometrica, che ha generato un oggetto essenziale e potente con importanti prestazioni luminose. Zena rappresenta una rivoluzione nel mondo delle lampade a parete, un esperimento contemporaneo che trasforma l'applicare da oggetto tradizionalmente statico in elemento dinamico e sofisticato, un'importante sintesi tra obiettivi di leggerezza, potenza e fruibilità. Zena è realizzata da un estruso in alluminio riciclabile.
- FR L'essentialité de Zena est le résultat d'une étude minutieuse de recherche géométrique qui a généré un objet essentiel et puissant avec des performances d'éclairage importantes. Zena représente une révolution dans le monde des appliques murales, une expérience contemporaine qui transforme l'applique murale d'un objet traditionnellement statique en un élément dynamique et sophistiqué, une synthèse importante entre les objectifs de légèreté, de puissance et de confort. Zena est fabriquée à partir d'un extrudé d'aluminium recyclable.
- DE Die essentielle Silhouette von Zena ist das Ergebnis einer rigorosen Forschung im Bereich des geometrischen Designs, die zur Schaffung eines charakteristischen und leistungsstarken Lichtobjekts geführt hat, das eine bedeutende Lichtleistung aufweist. Zena stellt eine Revolution in der Welt der Wandleuchten dar, ein zeitgenössisches Experiment, das die Wandleuchte von einem traditionell statischen zu einem dynamischen und raffinierten Element macht, eine wichtige Synthese aus Leichtigkeit, Leistung und Komfort. Zena besteht aus recyceltem Aluminium.

Linescapes System

Nemo

Linescapes is a modular system of continuous lines and angles, joined by moulded polymer joints that allow simple connecting and 360° rotation. The Linescapes system has been designed with the aim of providing extreme design versatility through simplified installation and easy care.

IT Linescapes è un sistema modulare che prevede la composizione di linee e angoli continui, uniti da giunti in polimero stampato che consentono una rapida connessione a jack e una rotazione di 360°. Il sistema Linescapes è stato studiato con l'obiettivo di fornire un'estrema versatilità progettuale attraverso semplicità di installazione e manutenzione.

FR Linescapes est un système modulaire de lignes et d'angles continus, reliés par des joints en polymère moulé qui permettent une connexion rapide et une rotation à 360°. Le système Linescapes a été conçu dans le but d'offrir une polyvalence de conception extrême grâce à une installation simplifiée et un entretien facile.

DE Linescapes ist ein modulares System aus durchgehenden Linien und Winkeln, die durch geformte Polymerverbindungen verbunden sind, die ein schnelles Anheben und eine Drehung um 360° ermöglichen. Das Linescapes-System wurde mit dem Ziel entwickelt, durch eine vereinfachte Installation und einfache Pflege eine extreme Designvielfalt zu bieten.

“Spigolo light is architecture itself: with its subtle profile it designs places and suggests new interpretations of the space”.

Studiocharlie

Spigolo

Studiocharlie

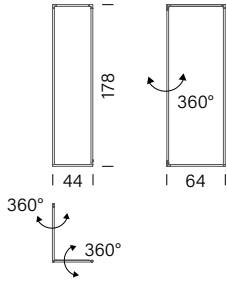

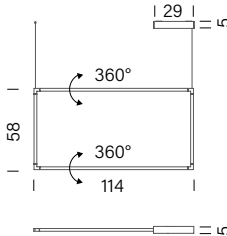

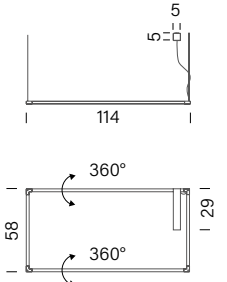

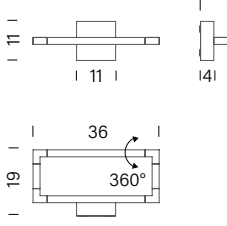

Designed to provide 360° directional lighting, the Spigolo collection features LED light sources housed within an extruded aluminium and tubular structure, connected by moulded polymer joints, which allow the profiles to rotate to produce direct or indirect lighting, shielded by a polycarbonate opal diffuser. The floor version is designed to provide a virtual room divider, while the ceiling and wall versions provide versatile and comfortable ambient lighting.

- IT Concepita per offrire un'illuminazione direzionale a 360°, la collezione Spigolo ospita sorgenti LED all'interno di una struttura in alluminio estruso e tubolare, collegata con giunti in polimero stampato, che consentono di ruotare i profili per produrre un'illuminazione diretta o indiretta, schermata da un diffusore opalino in polycarbonato. La versione a pavimento è progettata per fornire un divisorio virtuale agli ambienti, mentre le versioni a soffitto e a parete permettono di illuminare l'ambiente in modo versatile e confortevole.
- FR Conçue pour offrir un éclairage directionnel à 360°, la collection Spigolo abrite des sources LED à l'intérieur d'une structure en aluminium tubulaire extrudé, reliée par des joints en polymère moulé permettant de faire tourner les profilés pour un éclairage direct ou indirect, protégé par un diffuseur en polycarbonate opale. La version au sol est conçue pour fournir une cloison virtuelle des espaces, tandis que les versions plafond et applique permettent d'éclairer l'environnement de manière polyvalente et confortable.
- DE Die Spigolo-Kollektion ist für eine gerichtete 360°-Beleuchtung konzipiert. Die LED-Quellen befinden sich in einer Struktur aus stranggepresstem Aluminium, die durch Verbindungen aus gegossenem Polymer miteinander verbunden sind und eine Drehung der Profile ermöglichen, um eine direkte oder indirekte Beleuchtung zu erzeugen, die durch einen opalen Diffusor aus Polycarbonat abgeschirmt wird. Die Bodenversion dient als virtueller Raumteiler, während die Decken- und Wandversionen eine vielseitige und komfortable Raumbelichtung bieten.

Maga

Nemo

The elliptical opal blown glass sphere of Maga collection provides soft, diffused, glare-free light and adds a timeless, elegant touch to any interior with its silhouette. The pendant version fits beautifully into the surroundings as an individual complement or in a composition.

- IT La sfera ellittica in vetro soffiato opalino della collezione Maga fornisce una luce morbida, diffusa e priva di abbagliamento. Con la sua silhouette, aggiunge un tocco elegante e senza tempo a qualsiasi interior. La versione a sospensione si inserisce armoniosamente nell'ambiente come complemento individuale o in una composizione.
- FR La sphère elliptique en verre soufflé opale de la collection Maga offre une lumière douce, diffuse et sans éblouissement. Avec sa silhouette, elle ajoute une touche élégante et intemporelle à n'importe quel intérieur. La version suspension s'intègre harmonieusement dans la pièce en complément individuel ou en composition.
- DE Die elliptische Kugel aus mundgeblasenem Opalglas aus der Kollektion Maga spendet weiches, diffuses und blendfreies Licht. Mit ihrer Silhouette verleiht sie jedem Interieur eine zeitlos elegante Note. Die Pendelversion fügt sich harmonisch in den Raum ein, als einzelne Ergänzung oder in einer Gruppe.

"I feel so good in my cabanon that I will definitely end my life here"

Le Corbusier

Lampe Cabanon

Le Corbusier

In 1952, on the shores of the French Riviera, Le Corbusier built "Cabanon": the absolute archetype of essential living. The project, executed according to the rules of the Modulor, is found just a stone's throw away from the sea and served as a refuge for the architect in his final years. Lampe Cabanon, named after the inspired microcosm, represents a symbol of architecture, design, production, and essential living. The lampshade, made from tracing paper that the architect used, was crafted from a wartime artifact - a mortar shell carrier - found on French beaches. The lamp, for which numerous sketches and designs exist, represents a moment of rebirth in the post-war world.

- IT Nel 1952, sulle rive della Costa Azzurra, Le Corbusier costruì "Cabanon": l'archetipo assoluto dell'essenzialità dell'abitare. Un progetto realizzato secondo le regole del Modulor a pochi passi dal mare, un rifugio per l'architetto negli ultimi anni della sua vita. Lampe Cabanon, pensata per il microcosmo di cui porta il nome, rappresenta un simbolo dell'architettura, del design, della produzione e dell'arte di vivere essenziale. Un reperto bellico - una porta proiettili di mortaio - ritrovato sulle spiagge francesi è la base di un paralume realizzato con la carta da lucido con cui l'architetto lavorava. Una lampada di cui esistono numerosi schizzi e progetti, che rappresenta un momento di rinascita nel mondo del dopoguerra.
- FR En 1952, sur les rives de la Côte d'Azur, Le Corbusier a construit "Cabanon" : l'archétype absolu de l'habitat essentiel. Un projet, réalisé selon les règles du Modulor, à deux pas de la mer, un refuge pour l'architecte dans ses dernières années. Lampe Cabanon, conçue pour le microcosme dont elle porte le nom, représente un symbole de l'architecture, du design, de la production et de l'art de vivre essentiel. Une base issue d'un objet trouvé sur les plages françaises - un porte-obus de mortier - surmontée d'un abat-jour fabriqué à partir du papier glacé utilisé par l'architecte. La lampe Cabanon, dont il existe plusieurs croquis et dessins, représente un moment de renaissance du monde de l'après-guerre.
- DE 1952 errichtete Le Corbusier an der Côte d'Azur das "Cabanon", den absoluten Archetyp des essentiellen Wohnens. Das nach den Regeln des Modulor ausgeführte Projekt befindet sich nur einen Steinwurf vom Meer entfernt und diente dem Architekten in seinen letzten Lebensjahren als Zufluchtsort. Lampe Cabanon, benannt nach dem inspirierten Mikrokosmos, ist ein Symbol für Architektur, Design, Produktion und essentielles Leben. Der Lampenschirm aus Pauspapier, das der Architekt verwendete, wurde aus einem Artefakt aus dem Krieg - einem Mörsergranatenträger - gefertigt, das an französischen Stränden gefunden wurde. Die Lampe, für die zahlreiche Skizzen und Entwürfe existieren, stellt einen Moment der Wiedergeburt in der Nachkriegswelt dar.

Le Corbusier

Borne Béton

Le Corbusier

It was 1952 when Le Corbusier designed Borne Béton for the outdoor area of the Unité d'Habitation in Marseille and to enlighten Bhakra Dam, Sukhna Dam in India. An early experiment in the use of concrete for a collection of lamps along the lines of Brutalist architecture. Raw, spartan concrete is combined with a built-in LED source, combining different volumes emphasised by light. The small aesthetic and finishing variations make each Borne Béton a unique project.

- IT È il 1952 quando Le Corbusier progetta Borne Béton per l'area esterna dell'Unité d'Habitation di Marsiglia e per illuminare la diga di Bhakra, Sukhna Dam in India. Un primo esperimento di utilizzo del cemento per una collezione di lampade in linea con l'architettura brutalista. Il cemento grezzo e spartano viene accostato a una sorgente LED integrata, combinando diversi volumi enfatizzati dalla luce. Le piccole differenze estetiche e di finitura rendono ogni Borne Béton un progetto unico.
- FR C'est en 1952 que Le Corbusier conçoit Borne Béton pour l'espace extérieur de l'Unité d'Habitation à Marseille et pour éclairer le barrage de Bhakra, Sukhna Dam en Inde. Une première expérience dans l'utilisation du béton pour une collection de lampes dans la lignée de l'architecture brutaliste. Le béton brut et spartiate est associé à une source LED intégrée, combinant différents volumes mis en valeur par la lumière. Les petites différences esthétiques et de finition font de chaque Borne Béton un projet unique.
- DE 1952 entwarf Le Corbusier Borne Béton für den Außenbereich der Unité d'Habitation in Marseille und zur Beleuchtung des Bhakra, Sukhna Damms in Indien. Ein frühes Experiment mit der Verwendung von Beton für eine Lampenkollektion im Einklang mit der brutalistischen Architektur. Rauher und spartanischer Beton wird einer integrierten LED-Quelle gegenübergestellt, die verschiedene, durch das Licht hervorgehobene Volumen kombiniert. Die kleinen ästhetischen und verarbeitungstechnischen Unterschiede machen jede Borne Béton zu einem individuellen Projekt.

“Machine for living, says Le Corbusier. He’s right. Indeed, by expressing this thought, he lays the problem on factual grounds. It directs us towards a correct conception of housing problems. [...] In conclusion architects are asked, who are or should to be artists, to show oneself careful at least as much as the industrialists [...] they should lend exactly that service, as we have the right to expect it from them”

Maximilien Gauthier, *Le Corbusier, Biography of an Architect*, Bologna 1991

Parliament

Le Corbusier

Designed by Le Corbusier in 1963 for the Parliament in Chandigarh in India, Parliament is a symbol of 1950s modernism, inspired by the industrial lighting of the time. The adjustable diffuser consists of two open symmetrical cones for direct and indirect lighting. The finishes reflect the "claviers de couleurs" colour system developed by the Swiss-French master.

- IT Progettata da Le Corbusier nel 1963 per il Parlamento di Chandigarh in India, Parliament è un simbolo del modernismo degli anni Cinquanta, ispirato all'illuminazione industriale dell'epoca. Il diffusore regolabile è dotato di due coni simmetrici aperti per l'illuminazione diretta e indiretta. Le finiture corrispondono al sistema di colori "claviers de couleurs" elaborato dallo stesso maestro svizzero-francese.
- FR Conçu par Le Corbusier en 1963 pour le Parlement de Chandigarh en Inde, Parliament est un symbole du modernisme des années 1950, inspiré de l'éclairage industriel de l'époque. Le diffuseur orientable possède deux cônes symétriques ouverts pour un éclairage direct et indirect. Les finitions correspondent au système de couleurs "claviers de couleurs" développé par le maître franco-suisse lui-même.
- DE Parliament wurde 1963 von Le Corbusier für das Parlament in Chandigarh, Indien, entworfen und ist ein Symbol der Moderne der 1950er Jahre, inspiriert von der industriellen Beleuchtung jener Zeit. Der verstellbare Diffusor hat zwei symmetrische offene Kegel für direkte und indirekte Beleuchtung. Le Cadre Parfait

Le Corbusier

Le Cadre Parfait was designed by Le Corbusier in 1950, and was conceived for Heidi Weber, Swiss art collector, for her drawings and graphic works collection. By placing the glass within the frame, he completely changed its traditional proportions. The emerging glass transforms the oak frame into a perfect cubic body, hung on a wall or freely displayed as an object. As a result, the glass and the design appear to be floating. This process was the start of a research dedicated to the standardization of many elements linked to interior fittings. Nemo edits La Cadre Parfait in a solid beech wood structure and matte anodized aluminum details.

IT Disegnata da Le Corbusier nel 1950, Le Cadre Parfait è stata concepita per la collezione di disegni e per le opere grafiche di Heidi Weber, collezionista d'arte svizzera. Il posizionamento del vetro all'interno della cornice in rovere ne ha profondamente modificato le proporzioni tradizionali, trasformando il volume in un perfetto corpo cubico, che può essere appeso a una parete o liberamente esposto come oggetto. Il vetro e l'opera sembrano così fluttuare. Questo processo ha segnato l'inizio di una ricerca dedicata alla standardizzazione di molti elementi legati agli allestimenti interni. Nemo rivede La Cadre Parfait, realizzando una struttura in legno massello di faggio con dettagli in alluminio anodizzato opaco.

FR Le Cadre Parfait a été dessiné par Le Corbusier en 1950, et conçu pour Heidi Weber, collectionneur d'art suisse, pour sa collection de dessins et d'oeuvres graphiques. En plaçant le verre à l'intérieur du cadre, il a changé complètement ses proportions traditionnelles. Le verre émergeant transforme le cadre en chêne en un corps cubique parfait, accroché au mur ou librement exposé comme un objet. Ainsi, le verre et le design semblent flotter. Ce procédé a été le début d'une recherche dédiée à la standardisation de nombreux éléments liés à l'aménagement intérieur. Nemo édite La Cadre Parfait dans une structure en bois de hêtre massif et des détails en aluminium anodisé mat.

DE Le Cadre Parfait wurde 1950 von Le Corbusier für die Schweizer Kunstsammlerin Heidi Weber für ihre Sammlung von Zeichnungen und grafischen Werken entworfen. Indem er das Glas in den Rahmen setzte, veränderte er dessen traditionelle Proportionen völlig. Das hervortretende Glas verwandelt den Eichenholzrahmen in einen perfekten kubischen Körper, der an die Wand gehängt oder frei als Objekt präsentiert werden kann. So scheinen das Glas und das Design zu schweben. Dieser Prozess war der Beginn einer Forschung, die der Standardisierung zahlreicher Elemente im Zusammenhang mit der Innenausstattung gewidmet war. Nemo bearbeitet La Cadre Parfait mit einer Struktur aus massivem Buchenholz und Details aus matt eloxiertem Aluminium.

“Charlotte Perriand designed a whole family of lamps adjustable, revolving, and orientable: lamps with rotating screens and wall lamps with adjustable screens – painted with bright colors – or rotatable arms. To these “essential forms”, she will then add some fantastic inventions for specific use”

Arthur Ruegg, La Luce 2018

Applique Cylindrique

Charlotte Perriand

Designed by Charlotte Perriand for her mountain chalet Le Vieux Matelot, Applique Cylindrique is a design that dates back to the early 1930s. Her interest in pivoting screens reflects her observation on human gestures: a simple touch allows to direct the lampshade and to control the light beam, making it possible to adjust intensity and direction.

- IT Progettata da Charlotte Perriand per il suo chalet di montagna Le Vieux Matelot, Applique Cylindrique è un progetto che risale ai primi anni '30. Il suo interesse per gli schermi pivotanti riflette la sua osservazione sui gesti umani: un semplice gesto permette di orientare il paralume e di controllare il fascio di luce, consentendo così di giocare con direzione e intensità luminosa.
- FR Conçue par Charlotte Perriand pour son chalet de montagne Le Vieux Matelot, Applique Cylindrique est un projet qui remonte au début des années 1930. Son intérêt pour les écrans pivotants reflète son observation des gestes humains: un simple geste permet d'orienter l'abat-jour et de contrôler le faisceau lumineux, permettant ainsi de jouer avec la direction et l'intensité lumineuse.
- DE Applique Cylindrique wurde von Charlotte Perriand für ihre Berghütte Le Vieux Matelot entworfen und geht auf die frühen 1930er Jahre zurück. Ihr Interesse an schwenkbaren Schirmen spiegelt ihre Beobachtung menschlicher Gesten wider: Mit einer einfachen Geste lässt sich der Lampenschirm ausrichten und der Lichtstrahl lenken, was ein Spiel mit Richtung und Lichtintensität ermöglicht.

"In 1940 I designed a revolving and cheap lamp, manufactured with long, black tubes assembled in a shape of an inverted 'L', to bring electrical cable from the switch to the bulb"

Charlotte Perriand

Potence Pivotante

Charlotte Perriand was inspired by the boom of sailboats when in 1938 she conceived Potence Pivotante. Designed as a highly accessible swivel lamp, realized using two black tubular sections assembled in the shape of an inverted 'L' to lead the electrical wire from the switch to the bulb. The steel arm fixed to the wall rotates on the horizontal axis, describing an angle of almost 180°.

- IT Charlotte Perriand si ispira al boma delle barche a vela quando nel 1938 concepisce Potence Pivotante: due sezioni tubolari sono assemblate a forma di 'L' rovesciata per condurre il filo elettrico dall'interruttore alla lampadina. Il braccio in acciaio fissato alla parete ruota sul suo asse orizzontale, descrivendo un angolo di quasi 180°, rivelandosi una lampada orientabile facilmente accessibile e fruibile.
- FR Charlotte Perriand s'inspire de la bôme des voiliers lorsqu'elle conçoit Potence Pivotante en 1938 : deux tronçons tubulaires sont assemblés en forme de 'L' inversé pour conduire le fil électrique de l'interrupteur à l'ampoule. Le bras en acier fixé au mur tourne sur son axe horizontal, décrivant un angle de presque 180°, se révélant comme une lampe orientable facilement accessible et utilisable.
- DE Charlotte Perriand ließ sich von den Bäumen der Segelschiffe inspirieren, als sie 1938 die Potence Pivotante entwarf: Zwei Röhren sind in der Form eines umgekehrten 'L' zusammengesetzt, um den elektrischen Draht vom Schalter zur Lampe zu führen. Der an der Wand befestigte Metallarm dreht sich um seine horizontale Achse und beschreibt dabei einen Winkel von fast 180°, wodurch eine leicht zugängliche und benutzbare schwenkbare Lampe entsteht.

"The object is not neutral. There is also a relationship with man and this must be taken into account."

Charlotte Perriand

Pivotante à Poser

Charlotte Perriand

An avant-garde icon of the 1950s, *Pivotante à Poser* was conceived by Charlotte Perriand as an architectural element. The light emission interacts with the material texture, volumes, dimensions and graphic signs created by the two rotating diffusers, which allow both closing and opening of the light beam for direct or indirect light.

IT Icona dell'avanguardia degli anni '50, *Pivotante à Poser* viene concepita da Charlotte Perriand al pari di un elemento architettonico. L'emissione luminosa interagisce con la texture materica, i volumi, le dimensioni e i segni grafici creati dai due diffusori rotanti, capaci di chiudere e aprire il fascio luminoso per ottenere una luce diretta o indiretta.

FR Icône de l'avant-garde des années 50, *Pivotante à Poser* a été conçue par Charlotte Perriand comme un élément architectural. L'émission lumineuse interagit avec la texture du matériau, les volumes, les dimensions et les signes graphiques créés par les deux diffuseurs rotatifs, capables de fermer et d'ouvrir le faisceau lumineux pour obtenir une lumière directe ou indirecte.

"...after all, design is about responding to the gestures of the human being. Then there is a side even beyond this, which has to do with a sort of harmony with oneself, with one's environment; this kind of awareness affects everything"

Charlotte Perriand

Lampe de Bureau

Charlotte Perriand

Driven by the need to illuminate faces reflected in the mirror of a piece of furniture designed for the famous French glassworks Boussois, Charlotte Perriand created the Lampe de Bureau wall version in 1965. Inside the diffuser, the white preserves the natural color of the light, while outside, the finishes of the translucent molded glass appear pure and brilliant.

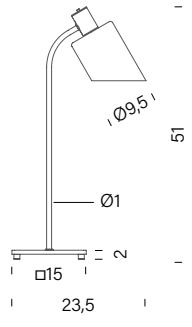

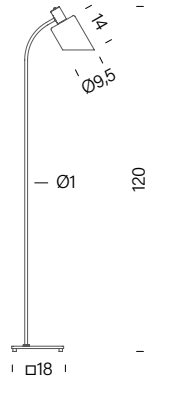

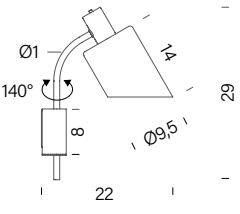

IT Dall'esigenza di illuminare i volti riflessi nello specchio di un mobile disegnato per la famosa vetreria francese Boussois, Charlotte Perriand crea nel 1965 la versione a parete di Lampe de Bureau. All'interno del diffusore il bianco preserva il colore naturale della luce, mentre all'esterno le finiture del vetro stampato traslucido appaiono pure e brillanti.

FR De la nécessité d'éclairer les visages reflétés dans le miroir d'un meuble conçu pour la célèbre verrerie française Boussois, Charlotte Perriand crée en 1965 la version murale de Lampe de Bureau. À l'intérieur du diffuseur, le blanc préserve la couleur naturelle de la lumière, tandis qu'à l'extérieur, les finitions du verre moulé translucide apparaissent pures et brillantes.

DE Aus dem Bedürfnis heraus, die Gesichter zu beleuchten, die sich im Spiegel eines für die berühmte französische Glashütte Boussois entworfenen Kabinetts spiegeln, schuf Charlotte Perriand 1965 die Wandversion von Lampe de Bureau. Im Inneren bewahrt der weiße Diffusor die natürliche Farbe des Lichts, während die transluzenten, geformten Glasoberflächen nach außen hin als rein und brillant erscheinen.

"The most important thing for me is conceptual simplicity, which is usually translated into constructive clarity. A conceptually simple object could be made just using the telephone"

Vico Magistretti

Claritas

Vico Magistretti

In 1946, Vico Magistretti conceived Claritas, his first lighting design, which conceptually aimed for clarity and brightness. In a context of reconstruction and reconversion of the war industry, for the first time Magistretti used bent metal tubes and a curved aluminium sheet as a reflector, which could be oriented and regulated, ensuring the desired lighting effect.

IT Nel 1946, Vico Magistretti crea Claritas, il suo primo progetto di illuminazione. Nel contesto della ricostruzione e della riconversione dell'industria bellica, per la prima volta Magistretti utilizza tubi metallici piegati e un foglio di alluminio curvo come riflettore. Magistretti raccoglie dalle macerie delle officine Breda di Milano subito dopo i bombardamenti degli elementi che costituiscono il primo prototipo della lampada.

FR En 1946, Vico Magistretti crée Claritas, sa première projet d'éclairage, qui visait conceptuellement la clarté et la luminosité. Dans le cadre de la reconstruction et de la reconversion de l'industrie de guerre, Magistretti utilise pour la première fois des tubes métalliques cintrés et une feuille d'aluminium cintrée comme réflecteur. Magistretti a récupéré les éléments dans les décombres des ateliers Breda à Milan, immédiatement après les bombardements, pour former le premier prototype de la lampe.

DE 1946 schuf Vico Magistretti mit Claritas seinen ersten Beleuchtungsentwurf, der konzeptionell auf Klarheit und Helligkeit abzielte. Im Rahmen des Wiederaufbaus und der Umstellung der Kriegsindustrie verwendete Magistretti erstmals gebogene Metallrohre und ein gebogenes Aluminiumblech als Reflektor. Unmittelbar nach der Bombardierung sammelte Magistretti die Elemente aus den Trümmern der Breda-Werkstätten in Mailand und formte daraus den ersten Prototyp der Leuchte.

Titia p.84
Kepler p. 120
In The Wind p. 126

Born in 1975 in Japan, Arihiro Miyake graduated from Kobe University of Design in 1999 and received a master's degree in furniture and spatial design at Aalto University in Finland in 2002. After working for design studios in Helsinki and Milan, he founded his own design 'Studio Arihiro Miyake' in Helsinki, pursuing an immortal aesthetic based on technical and innovative challenges.

Bernhard Osann
Fox p. 56
Neo p. 66
Swan p. 78
Untitled p. 88
Bird p. 116

Bernhard Osann, born in Augsburg, runs his design studio in Hamburg since 2014. He studied at the University of Fine Arts in Hamburg. He experiments with physical laws and geometrical shapes to find new unconventional solutions to simplify objects. The results are minimalistic dynamic constructions that move, interact with space and invite you to connect.

Carlo Colombo
Sirius p. 268

Promoter of made in Italy and sustainability, Carlo Colombo is a versatile architect, also involved in product design, graphics and interior design. After graduating from Politecnico Milano following Achille Castiglioni's courses, Colombo learned the value of materials and proportions from his family's carpentry workshop and found in the domestic reality a breeding ground for experimentation. Synthesis between form and function is a common feature of his designs.

Charles Kalpakian
Tubes p. 164
Wall Shadows p. 178

Charles Kalpakian was born in Beirut in 1982. In 2011, after collaborating with Christophe Pillet, he opened his own studio. Geometric lines are the signature of his innovative approach, fusing his oriental roots, his knowledge of design and the decorative arts as well as his passion for the urban contemporary culture.

Charlotte Perriand
Applique Cylindrique p. 374
Potence Pivotante p. 378
Pivotante à Poser p. 384
Applique à Volet Pivotant p. 390
Lampe de Bureau p. 398

Charlotte Perriand was an architect, designer, as well as an enthusiastic hiker and skier, a visionary, an independent woman and a global traveller. From the early decades of the 20th century, she revisited the concept of design and its aesthetic values, giving life to contemporary design through timeless, iconic and authentic objects that bear witness to modern times.

Euga Design
Panama p. 184

Euga is a design duo composed of Eugenio Gargioni, industrial designer, and Paola Traversa, architect, who first met in Florence at Claudio Nardi Architects. In 2007 they founded Euga Design in Milan, a studio that received several awards including the Reddot Award 2010. Euga pursues the harmony of simplicity and balance with a global approach and a keen eye for detail when working on a product or space.

Foster + Partners
Ilium p. 214

Foster + Partners is a global studio for sustainable architecture, urbanism, engineering and design, founded by Norman Foster in 1967. With offices across the world, the practice works as a single entity that is both ethnically and culturally diverse, with people central to all their endeavours.

Franco Albini
Albini Collection
AM/AS p. 362

Graduated in Architecture at Politecnico Milano, Franco Albini is known for his rationalist projects in urban planning, buildings and museums: in 1931 his first studio opened dealing with social housing and then devoted himself to experimental design studies, debuting at the V Triennale in 1933. In the post-war period, he broadened his professional interests thanks to the opportunities offered by reconstruction and developed new design sensibilities thanks to his partnership with Franca Helg in 1951. In the 1960s they designed the Milan underground, which earned him the Compasso d'Oro 1964.

Guillaume Bloget
Type p. 196

Guillaume Bloget is an independent designer based in Paris. After graduating at ENSCI-Les Ateliers with honours in 2016, he first worked for designers and architects on furniture, object and interior design projects before founding his own industrial design studio in 2018.

Ilaria Marelli
Ara p. 190

Italian architect and designer, Ilaria Marelli founded her studio in 2004, which she defines as a true laboratory of ideas, through which she works on art direction, product design, interior and set design. Marelli teaches “Innovation design” at Politecnico di Milano, and promotes ideas on social innovation, such as the first Italian co-housing project.

Javier Mariscal
Mr. Light p. 210

Valencian by birth, Barcelonean by adoption, Javier Mariscal is an exuberant artist, graphic designer, illustrator, furniture designer, filmmaker, painter, sculptor and ceramicist. In 1979, he first considered himself an outstanding designer with the concept of the Barcelona logo. Mariscal won the 'National Design Award' in 1999 and became an honorary member of the Royal Design Industry in 2006.

Jean Nouvel
On Lines p. 60

Known for his strong and provocative views on contemporary architecture in the urban context, the Frenchman Jean Nouvel became a founding member of the 'Mars 1976' Movement, whose aim was to oppose the corporatism of architects, and later started the French Union of Architecture. His ability to bring originality to all the projects he undertakes shapes his international image.

Jehs+Laub
Crown p. 100

A harmonious team of versatile and creative designers: Markus Jehs and Jürgen Laub. After their academic studies in industrial design in Germany, they worked on joint projects in New York in 1990. Strengthened by the experience of other cultures, they returned to Stuttgart, where they founded their creative design and innovation workshop. Influenced by the Bauhaus tradition, their design language is extravagant, sculptural and unique.

Kazuhide Takahama
Saori p. 414

After graduating in architecture in Tokyo, Kazuhide Takahama arrived in Italy in 1957 for the Milan Triennale. He stayed there for a long time, meeting Dino Gavina with whom he would collaborate for a long time and coming into contact with the most active Italian designers. In this lively climate of cultural exchange he began to develop his own stylistic vocabulary. For lighting, he was inspired by traditional oriental lamps, replacing rice paper with fabric to achieve a unique light diffusion.

Le Corbusier
Escargot p. 304
La Roche p. 308
Lampe Cabanon p. 314
Borne Béton p. 318
Parliament p. 324

Le Corbusier was a painter, urban planner, sculptor and writer, but above all is considered one of the main precursors of Modern Architecture. Famous for using reinforced concrete and steel together. His works feature distinctive geometric shapes that adhere to a precise philosophy and manifesto to which Le Corbusier was faithful throughout his oeuvre.

Mario Barbaglia
Logo p. 200
Norma p. 272
Anita p. 276

In the architecture studio in Milan, Mario Barbaglia and Marco Colombo started a project mainly related to interior design. Their designs include the DOVE lamp, which became the second best-selling table lamp in the world. It was exhibited at the MOMA in New York and entered the collections of the Musée des Arts Décoratifs in Paris and the Cooper Hewitt in New York.

Mario bellini
Nuvola p. 70

Awarded eight times with the Compasso d'Oro, Mario Bellini is an internationally renowned architect and designer who has twice been dedicated a solo exhibition: in 1987 at Moma in New York, which presented 25 of his works within its permanent collection, and in 2017 at the Milan Triennale, after conferring him the Gold Medal for Lifetime Achievement in Architecture. Over the years, he has been editor of Domus magazine and has designed many exhibitions of art, design and architecture, both in Italy and abroad.

Piero Castiglioni
Roberto Menghi
Canna Nuda p. 204

Beneath the guidance of Roberto Menghi, architect, designer and master in mixing contemporaneity with primitivism, Piero Castiglioni designed Canna Nuda. Castiglioni likes to call himself an electrician, before being an architect. He started his business in the 1970s when the introduction of the first halogen lamps on the European market aroused curiosity and interest.

Roberto Paoli
Tru p. 138
Flaca p. 174
Zena p. 218

After his degree in architecture in 1994, Roberto Paoli devoted himself to small-scale design, specialising in glass bending and plastic injection moulding techniques creating his own design idea in which functionality and technology merge with the shape of objects. Winner of three Chicago Good Design Awards, Paoli also focuses on product design and exhibition curating.

Rudy Ricciotti
Mais plus... p. 158

Winner of the Grand prix National d'Architecture in 2006 and the Médaille d'or de l'Académie d'architecture, Rudy Ricciotti represents the generation of architects who combine design power with a genuine architectural culture. Born in Algeria, Rudy Ricciotti is an architect and engineer whose background spans France and Switzerland. As a pioneer and ambassador of concrete, he enhances its innovative applications in iconic projects.

Studiocharlie
Spigolo p. 248

Founded in 2002, Studiocharlie focuses on designing objects that surprise by their essentiality, and reveal thought beyond simplicity. Besides collaborating with numerous brands, they are involved in editorial and cultural projects on design. In 2018, they won the Compasso d'Oro ADI award.

Valerio Sommella
Portofino p. 222

Born in Milan, where he graduated in Design at Politecnico Milano, Valerio Sommella started his career working for major design studios between Milan and Amsterdam before founding his own studio in 2009. He considers each project as an opportunity to express his idea of design, by exploring the language of objects through formal, material and technological research.

Vico Magistretti
Claritas p. 406
Kuta p. 410

Ranked among the leading exponents of the 'third generation' of Masters, Vico Magistretti is a Milanese architect and designer. He graduated in architecture from Politecnico Milano in 1939 where he opened his own studio. In 1946, he founded the Movimento di Studi per l'Architettura and took part in setting up the Italian design industry. During his career he received four Compasso d'Oro awards.
